Hi Alan,

I found out that the oil came from a leak into cooling system water and then discharged thru an outfall on Monday. A boom was put into place and vacuum trucks were deployed to suck up the oil. Wind and waves pushed the oil to shore. Crews are cleaning up the beach/shore and are assessing for submerged oil at the outfall.

Hammond has been monitoring near their intakes and I believe they have not detected anything.

Tom

Hi Tom,

Any updates regarding the spill and remediation?

Thank you,

Alan
